SAND MANAGEMENT NETWORK

TECHNOLOGY AWARENESS SESSION

DATE:

Wednesday
30th October 2019

9.00am - 1.00pm

(including lunch)

Afternoon session depending on interest

Technology Awareness Sessions are new half day seminars from the Sand Management Network. Taking place in small groups, this is a chance to get a real insight into new technologies, tour members facilities and see the products first hand.

EVENT DETAILS:

Kindly hosted by NOV, our next Technology Awareness Session will be at their Montrose manufacturing and Service facility.

The presentations will be focussed on the challenges which solids cause to the topside production process and importantly open discussions around the approaches taken to understand, mitigate and handle these issues and what technologies are available to do so.

During the visit there will be a tour of the manufacturing workshops, demonstration of NOV's solids handling technology and potentially a close-up viewing of a North Sea sand handling system.
